ABOUT ME	
I am a software engineer specializing in enterprise applications. Throughout my career, I have amassed extensive experience in developing and delivering innovative solutions across diverse domains, including enterprise systems, e-commerce, fintech, and biometric authentication. With over 8 years of professional experience in the IT industry developing, maintaining, and deploying enterprise applications and possessing a robust background in both backend and frontend development, utilizing technologies such as Spring Boot, Angular, React.js, and Vue.js. Hands-on experience working in Agile environments, collaborating with cross-functional teams to deliver high-quality software solutions efficiently. Passionate about designing, coding, testing, and troubleshooting applications, as well as deploying them through CI/CD pipelines.	
EDUCATION	
Undergraduate Education	
❖ School Name: Da Nang University of Science and Technology ❖ Major: Information Technology ❖ Degree: Bachelor ❖ Date Joined: 09/2010 – 09/2015 ❖ GPA: 2.97/4	
Graduate Education	
❖ School Name: Maharishi International University ❖ Major: Computer Science ❖ Degree: Master ❖ Date Joined: 04/2024 – Present ❖ Key Courses: Web Application Development, Software Engineering, Advanced Software Development, Algorithm	
SKILLS	
❖ Core Competencies Problem-solving, Data Structure, Object Oriented Programming (OOP), Design Patterns, Web Application, Database Development, Unit Testing and Debugging, Code Version Control, Software Development Lifecycle (SDLC) ❖ Technical Skills • Languages: Java, JavaScript, TypeScript • Web: JSP, Servlet, HTML, CSS, JavaScript, jQuery, Bootstrap, React.js, Vue.js, Material UI, PrimeNG UI • Web Services: Restful API • Web and Application Servers: Apache, Tomcat • Frameworks: Spring MVC, Spring Boot, Struts, JSF, Express.js, Angular • Databases: MS SQL, MySQL, Postgres, MongoDB • Design Patterns: Singleton, Factory Method, Abstract Factory, Builder, Command, Iterator, Observer, Strategy, Template Method, Adapter, Composite, Decorator, Facade • Software Development Lifecycle (SDLC): Agile (Scrum, Kanban), Waterfall • Tools: Maven, Ant, Eclipse, IntelliJ, GitHub Action, VSCode, SonarQube, JIRA, Azure (Azure Devops, Azure AD, Azure AppServices, Azure Blob Storage, Azure Function, Azure Cosmos DB), AWS (EC2, S3, DynamoDB, Lambda), Docker • Platforms: Window, Linux	
PROFESSIONAL EXPERIENCE	
Transcosmos Technology Vietnam Co., Ltd (formerly Transcosmos Technologic Art)	
❖ Job Title: Software Developer ❖ Address: Ho Chi Minh city, Viet Nam ❖ Date Employed: 10/2015 – 06/2018	

- ❖ **Description:**

Trancosmos Technologic Arts (TTV) is a Japanese agile software development and offshore company founded in 2014. Operating primarily in Vietnam and the Asia-Pacific region, TTV offers services such as software development, product development, web design, and mobile app development. TTV emphasizes agile methodology, a highly skilled team, and continuous improvement.
- ❖ **Responsibilities and Achievements:**
 - Developed and maintained an e-commerce web application called OpenMarket using Java, Spring MVC, HTML, CSS, JavaScript, jQuery, MySQL, Hibernate, GitLab, Shell Script, and Linux, enabling users to rent or purchase properties, achieving a 60% increase in user engagement.
 - Improved an entertainment web application called Xing (Joysound) using Java, Spring Boot, AngularJS, Oracle Database, SonarQube, and GitLab, allowing users to listen to music, watch movies, sing karaoke, and buy or rent DVDs/VCDs, improving user satisfaction and user engagement by 50%.
 - Conducted an onsite visit to Japan and collaborated with the VietNam team to analyze, design, develop, deploy, and maintain the Dartslive Search web application (<https://search.dartslive.com/>) utilizing Java, Servlet, JSP, Spring Batch, HTML, CSS, JavaScript, JSRender, Bootstrap, MySQL, SonarQube, Gitlab, Shell Script, and Linux, which supports users in easily finding the nearest shop and visiting them, successfully streamlining the shop search functionality and increasing user visits by 50%.
 - Optimized the loading time for a CMS system called Panasonic using Java, Spring MVC, HTML, CSS, JavaScript, jQuery, MySQL, SonarQube, and GitLab which enables users to rent or purchase properties, including houses and apartments, resulting in a 50% increase in user visits.
- ❖ **Technologies Used:**

Java, Spring Framework, Spring Batch, AngularJS, HTML, CSS, JavaScript, jQuery, JSRender, Bootstrap, MySQL, Oracle Database, Hibernate, Google Map API, SonarQube, GitLab, Shell Script, Linux

MTI Technology Da Nang

- ❖ **Job Title:** Software Fullstack Developer
- ❖ **Address:** Da Nang city, Viet Nam
- ❖ **Date Employed:** 07/2018 – 04/2021
- ❖ **Description:**

Founded in 2016, MTI Technology specializes in digital transformation solutions, leveraging Agile and Lean methodologies. The company offers consulting services and AI-powered solutions designed to enhance efficiency and effectiveness.
- ❖ **Responsibilities and Achievements:**
 - Contributed as a software developer to the Conformance Suite (<https://gitlab.com/openid/conformance-suite/>) using Java, Spring Boot, HTML, CSS, JavaScript, Lodash.js, OpenID Connect, OAuth2, MongoDB, GitLab CI/CD, and Docker, an open-source project managed by the OpenID Foundation, resolving 80 issues and successfully released milestones for FAPI tests, and CIBA-v1. For more details on my contributions, please visit <https://gitlab.com/users/nhatlv/activity>.
 - Analyzed and implemented the video call feature in a healthcare system using JavaScript, TypeScript, Express.js, React.js, Azure DevOps, AWS Cloud Services, AWS DynamoDB, Twilio Video API, and SonarQube, which facilitates video call connections between patients, doctors, clinics, and hospitals. Enhanced system functionality, increased user satisfaction by 50%, and reduced connection issues by 60% during the COVID-19 pandemic.
 - Designed, developed, and deployed an eKYC solution for Japanese financial institutions using .Net Core, JavaScript, Vue.js Nuxt.js, MS SQL, Azure CosmosDB, Azure Cloud Services, and Azure DevOps, which leverages biometric authentication technology to support the opening of bank accounts with identification documents such as ID, Driver’s Licenses, and Passports, successfully implemented biometric authentication, reducing account opening time by 50% and enhancing security compliance by 45%.
- ❖ **Technologies Used:**

Java, Spring Boot, .Net Core, Express.js, React.js, Vue.js, Nuxt.js, HTML, CSS, JavaScript, TypeScript, Lodash.js, MS SQL, MongoDB, Gitlab CI/CD, SonarQube, Azure Cloud Services, AWS Cloud Services, Docker, Twillio Video API, OpenID Connect (OIDC), OAuth2

Bouygues Construction IT Viet Nam (VSL VietNam LTD)

- ❖ **Job Title:** Sr. Software Fullstack Developer
- ❖ **Address:** Ho Chi Minh city, Viet Nam
- ❖ **Date Employed:** 05/2021 – 05/2024

❖ **Description:**

Bouygues Construction IT Vietnam (BYCN IT VN) is the IT branch of Bouygues Construction, a global leader in the building, civil works, energy, and services sectors. Established to provide high-quality IT services, BYCN IT VN focuses on software development, system monitoring, security, and user support. Located in Ho Chi Minh City, Vietnam, BYCN IT VN aims to enhance the competitiveness and digital transformation of Bouygues Construction Group.

❖ **Responsibilities and Achievements:**

- Engineered an enterprise application called Eparaph using Java, Spring Boot, Angular, PrimeNG UI, MS SQL, SonarQube, Azure Active Directory, and Git, which facilitates comprehensive employee management across all departments, replacing traditional paper forms and digitizing the employee management process, reducing paperwork by 70% and improving approval times by 60%.
- Developed a web application called Scanbeton using Java, JSF, Primefaces, JavaScript, SonarQube, MS SQL, Azure Active Directory, and Git, which enables the management of concrete quality and volume at construction sites, enhancing issue reporting efficiency, leading to a 40% reduction in response time for concrete quality issues.
- Maintained an enterprise solution called Vigilance using Java, Spring Boot, Angular, PrimeNG UI, SonarQube, Postgres, and Git, which facilitates the management of employees and departments, as well as the monitoring of construction sites, reporting construction site issues via mobile app with photos for improved monitoring and operational efficiency, resulting in a 30% increase in operational efficiency.
- Investigated and resolved the security issues based on the top 10 OSWAP report for a web application called Portail Depot Facture applying Java, JSF, Primefaces, SonarQube, MS SQL, and Git, which functions as a portal for managing PDF documentation and sending notifications emails to the responsible parties whenever changes occur, streamlining document management processes, reducing manual errors by 60% and improving notification response times by 45%.
- Implemented a service called Portail-partenaires using Java, Spring Boot, Angular, PrimeNG UI, Postgres, Azure Active Directory, OpenID Connect (OIDC), and OAuth2, which functions as an identity server, serving as a portal to manage external users and integrating with all projects for authentication and authorization, successfully transitioned to Azure Active Directory (Azure Entra ID) for all the projects instead of using this service, enhancing security and reducing authentication issues by 35%.

❖ **Technologies Used:**

Java, Spring MVC, Spring Boot, JSF, Primefaces, Angular, PrimeNG UI, MS SQL, Postgres, Azure Active Directory (Entra ID), SonarQube, GitHub Actions, OpenID Connect (OIDC), OAuth2
