ABOUT ME

I am a software engineer specializing in enterprise applications. Throughout my career, I have amassed extensive experience in developing and delivering innovative solutions across diverse domains, including enterprise systems, e-commerce, fintech, and biometric authentication.

With over 8 years of professional experience in the IT industry, I possess a robust background in both backend and frontend development using technologies such as SpringBoot, Angular, ReactJS, and VueJS. I am passionate about designing, coding, testing, and troubleshooting applications, building architectures, deploying with CI/CD, and leveraging new technologies to drive innovation and efficiency.

Pursuing a master’s degree has further expanded my technical expertise and experience. I am eager to take on more responsibilities and contribute to impactful projects in the near future.

SKILLS

- **Core Competencies**
Problem-solving, Data Structure, Object Oriented Programming (OOP), Design Patterns, Web Application, Web Services, Database Development, Unit Testing, Debugging, Code Version Control, Software Development Lifecycle (SDLC)
- **Technical Skills**
 - **Languages:** Java, JavaScript, TypeScript
 - **Web:** JSP, Servlet, HTML, CSS, JavaScript
 - **Web Services:** Restful API
 - **Web and Application Servers:** Apache, Tomcat
 - **Frameworks:** Spring MVC, Spring Boot, Struts, JSF, ExpressJS, Angular, ReactJS, VueJS, Material UI, PrimeNG UI
 - **Databases:** MS SQL, MySQL, Postgres, MongoDB
 - **Design Patterns:** Singleton, Strategy, Observer, Decorator, Factory, Command, Adapter, Façade, Template Method
 - **Software Development Lifecycle (SDLC):** Agile (Scrum, Kanban), Waterfall
 - **Tools:** Maven, Ant, Eclipse, IntelliJ, GitHub Action (CI/CD), VSCode, SonarQube, JIRA, Azure (Azure DevOps, Azure AD, Azure AppServices, Azure Blob Storage, Azure Function, Azure Cosmos DB), AWS (EC2, S3, DynamoDB, Lambda) Docker
 - **Platforms:** Windows, Linux

PROFESSIONAL EXPERIENCE

Transcosmos Technology Vietnam Co., Ltd (formerly Transcosmos Technologic Art)

- **Job Title:** Software Engineer
- **Address:** Ho Chi Minh city, Viet Nam
- **Date Employed:** 10/2015 – 06/2018
- **Description:**

Transcosmos Technologic Arts (TTV) is a Japanese agile software development and offshore company founded in 2014. Operating primarily in Vietnam and the Asia-Pacific region, TTV offers services such as software development, product development, web design, and mobile app development. TTV emphasizes agile methodology, a highly skilled team, and continuous improvement.
- **Responsibilities and Achievements:**
 - Worked as a software developer in the OpenMarket project, a comprehensive CMS system enabling users to rent or purchase properties, including houses and apartments. Responsible for analyzing, coding, and maintaining the project for 1 year using Java, Spring Framework, HTML, CSS, JavaScript, JQuery, MySQL, and Gitlab.
 - Worked as a software developer in the Xing (Joysound) project, an entertainment system allowing users to listen to music, watch movies, sing karaoke, and buy or rent DVDs/VCDs. Responsible for coding, testing, and maintaining the project using Java, Spring Boot, AngularJS, Oracle Database, SonarQube, and Gitlab.
 - Conducted an onsite visit to Japan to study and prepare for the project, followed by sharing with team members in Vietnam. And then worked as a software developer on the Dartslive project,

analyzing, designing, developing, and maintaining the Dartslive game shop to enhance the gaming experience for users. The user can easily find the nearest shop and visit them. Utilized Java, Servlet, JSP, Spring Batch, HTML, CSS, JavaScript, JSRender, MySQL, SonarQube, SonarLint Gitlab. Successfully streamlined the shop search functionality, increasing user visits. For more information, visit: <https://search.dartslive.com/>

- Worked as a software developer in the Panasonic project, a CMS system enabling users to rent or purchase properties, including houses and apartments. Responsible for maintaining and testing the project using Java, Spring Framework, HTML, CSS, JavaScript, JQuery, MySQL, SonarQube, and Gitlab.

- **Technologies Used:**
Java, Spring Framework, Struts Framework, HTML, CSS, JavaScript, JQuery, MySQL, Hibernate, Google Map API, SonarQube, SonarLint, GitLab

MTI Technology Da Nang

- **Job Title:** Software Engineer
- **Address:** Da Nang city, Viet Nam
- **Date Employed:** 07/2018 – 04/2021
- **Description:**
Founded in 2016, MTI Technology specializes in digital transformation solutions, leveraging Agile and Lean methodologies. The company offers consulting services and AI-powered solutions designed to enhance efficiency and effectiveness.
- **Responsibilities and Achievements:**
 - Contributed as a software developer to the Conformance Suite, an open-source project managed by the OpenID Foundation. The source code is available on GitLab: <https://gitlab.com/openid/conformance-suite/>. The Conformance Suite is freely accessible for testing OpenID deployments, though a fee is required for OpenID certifications. Responsible for analyzing, coding, and testing issues logged on the GitLab project board using Java, Spring Boot, HTML, CSS, JavaScript, LodashJS, OpenID Connect, OAuth2, MongoDB, GitLab CI/CD, and Docker.
 - Worked as a Fullstack developer in a scrum team responsible for developing a healthcare system that facilitates connections between patients, doctors, clinics, and hospitals through video calls. Responsible for analyzing, coding, and testing features using JavaScript, TypeScript, NodeJS, ReactJS, Azure DevOps, AWS Cloud Services, Twilio Video API, and Sonarqube. Enhanced the system’s functionality, increasing user satisfaction and reducing connection issues during the COVID-19 pandemic.
 - Served as a Fullstack developer in a scrum team responsible for developing an eKYC solution for Japanese financial institutions, utilizing biometric authentication technology. This solution supports opening bank accounts using identification documents such as Driver’s Licenses, Passports, ..etc... Responsible for analyzing, coding, and testing features using DotNet Core Framework, JavaScript, VueJS, NuxtJS, Azure CosmosDB, and Azure Cloud Services, Azure DevOps. Successfully implemented biometric authentication, reducing account opening time and increasing security compliance.
- **Technologies Used:**
Java, Spring Boot, Node.js, C#, .NET Core, ReactJS, VueJS, Hibernate, MongoDB, Gitlab CI/CD, Sonarqube, Azure Cloud Services, AWS, Twillio Video API, OpenID Connect (OIDC), OAuth2

Bouygues Construction IT Viet Nam (VSL VietNam LTD)

- **Job Title:** Sr. Software Engineer
- **Address:** Ho Chi Minh city, Viet Nam
- **Date Employed:** 05/2021 – 05/2024
- **Description:**
Bouygues Construction IT Vietnam (BYCN IT VN) is the IT branch of Bouygues Construction, a global leader in the building, civil works, energy, and services sectors. Established to provide high-quality IT services, BYCN IT VN focuses on software development, system monitoring, security, and user support. Located in Ho Chi Minh City, Vietnam, BYCN IT VN aims to enhance the competitiveness and digital transformation of Bouygues Construction Group.
- **Responsibilities and Achievements:**
 - Worked as a Sr. Fullstack Developer on a web application called Eparaph, which facilitates comprehensive employee management across all departments. Managers can create various forms, such as leave forms and contract forms, which employees can use to submit requests. These requests are then routed to the respective managers for approval. This application effectively replaces traditional paper forms. I was responsible for analyzing, coding, and testing most of the features on that project using Java, Spring Boot, Angular, PrimeNG UI, MS SQL, SonarQube, Azure Active Directory, and Git. Successfully digitized the employee management process, reducing paperwork and improving approval times.

- Worked as a Sr. Java Developer on a web application called Scanbeton, which enables the management of concrete quality and volume at construction sites. In case of any issues with the concrete, users can take a picture, provide relevant information, and report the issue to their manager via the mobile application. I was responsible for analyzing, coding, and testing the features of that project using Java, JSF, Primefaces, JavaScript, SonarQube, Git, MS SQL, and Azure Active Directory. Enhanced issue reporting efficiency, leading to a reduction in response time for concrete quality issues.
- Worked as a Sr. Fullstack Developer on a web application called Vigilance, which facilitates the management of employees and departments, as well as the monitoring of construction sites. In the event of any issues at the construction site, users can utilize the mobile application to take pictures and report the issues to the back-office department. I was responsible for analyzing, coding, and testing the features of that project using Java, Spring Boot, Angular, PrimeNG UI, SonarQube, Postgres, and Git. Improved site monitoring and issue reporting, increasing operational efficiency.
- Worked as a Sr. Java Developer on a system called Portail Depot Facture, which functions as a portal for managing PDF documentation and sends notification emails to the responsible parties whenever changes occur. I was responsible for analyzing, coding, and testing the features of that project using Java, JSF, Primefaces, Sonarqube, Git, MS SQL. Streamlined document management processes, reducing manual errors and improving notification response times.
- Worked as a Sr. Fullstack Developer on a system called Portail-partenaires, which functions as an identity server, serving as a portal to manage external users and integrating with all projects for authentication and authorization. Since 2023, we have transitioned to using Microsoft Azure AD (Entra ID) for authentication and authorization purposes. I researched and integrated Microsoft Azure AD (Entra ID) into all the projects that were using Portail-partenaires as an identity server, replacing Windows Active Directory for authentication and authorization. The main technologies used were Java, Spring Boot, Angular, PrimeNG UI, PostgreSQL, Azure Active Directory, OpenID Connect (OIDC), OAuth2, and Windows Server. Successfully transitioned to Microsoft Azure AD (Entra ID), enhancing security and reducing authentication issues.

- **Technologies Used:**
Java, Spring MVC, Spring Boot, JSF, Angular, Microsoft SQL Server, PostgreSQL, Azure Active Directory, SonarQube, GitHub CI/CD, Jenkins, OpenID Connect (OIDC), OAuth2.

EDUCATION

Undergraduate Education

- **School Name:** Da Nang University of Science and Technology
➤ **Major:** Information Technology
➤ **Degree:** Bachelor
➤ **Date Joined:** 09/2010 – 09/2015
➤ **GPA:** 2.97/4

Graduate Education

- **School Name:** Maharishi International University
➤ **Major:** Computer Science
➤ **Degree:** Master
➤ **Date Joined:** 04/2024 – Present
➤ **Key Courses:** Web Application Development, Software Engineering, Advanced Software Development, Algorithm
➤ **Academic Projects:**
 - **Library System:**
Collaborated with a team of 4 students to design and implement a solution for the Library Problem. Created class diagrams to illustrate attributes, operations, associations, and inheritance relationships. Developed sequence diagrams for various use cases. Designed and implemented a user interface using Java and Swing. Utilized object serialization for data reads and writes, eliminating the need for a database. This project helped us understand how to apply Object-Oriented Principles in a practical context.
See the source code: <https://github.com/vnhatle/mpp-library-system>

Technologies Used: Java, Swing, Maven

- **Daily Diary**
Developed a full-stack web application using React for the frontend and Express for the backend, focusing on state management, API interactions, and component-based architecture. The application displays daily diary posts from users, allowing navigation through previous and upcoming days with deactivation of the upcoming day button if the current posts are for today. Users can contribute and submit diary posts consisting of a title and body, and can up-vote or down-vote posts multiple times. The daily diary posts are displayed sorted by votes in descending order.

See the source code: <https://github.com/vnhatle/daily-diary-fullstackjs-ci-cd>

Technologies Used: JavaScript, TypeScript, NodeJS, ReactJS, Github CI/CD, Heroku, Netlify

- **Car Rental System**

Developed a full-stack web application called Car Rental System using React for the front end and SpringBoot for the back end. The application streamlines the vehicle rental process by allowing customers to view available cars, make reservations, and manage their rentals. Additionally, it enables the rental company to efficiently manage vehicle inventory, track reservations, and process payments.

See the backend source code: <https://github.com/vnhatle/crs-service>

See the frontend source code: <https://github.com/vnhatle/crs-web>

Technologies Used: Java Spring Boot, ReactJS, AWS MySQL, AWS EC2, AWS S3, GitHub CI/CD
